

Curriculum training: accuracy across epochs (LP-Net, ResNet-18)

Seven stages of 4 → 8 → 16 → 32 → 64 → 128 → all classes per category (faces, objects, houses);
the top row gives the classes active in each stage.

Each stage is scored on its own active class subset, so accuracy is not comparable across stages: the drop at every dashed rule is the class count rising, not the model degrading. Final stage = all 393 classes.
